

Mount Everest

Mount Everest is Earth's highest mountain above sea level, located in the Mahalangur Himal sub-range of the Himalayas. Its official height, as recognized in a 2020 joint remeasurement by China and Nepal, is 8,849 meters (29,032 feet).

The mountain sits on the border between Nepal and the Tibet Autonomous Region of China. It is known as Sagarmatha in Nepali and Qomolangma in Tibetan.

The first confirmed summit of Mount Everest was achieved on May 29, 1953, by Edmund Hillary of New Zealand and Tenzing Norgay, a Sherpa mountaineer from Nepal.

Everest is part of the Himalayan mountain range, which formed from the collision of the Indian and Eurasian tectonic plates and continues to rise a few millimeters each year.
